

**Below:** The compact design of the P200 edgebander from Felder is an ideal machine to purchase when space is limited. According to Felder the machine has been designed with the end user in mind making for a low maintenance edgebander that is easy to set up. Features that make this possible include easier access to knobs and dials (right) and top and bottom moulder cutters with TCT replaceable knives (below right).

*Take a look at Felder's new range of edgebanders. It could change the way you look at edgebanders forever*

Edgebanders can be temperamental, requiring a lot of maintenance and set up time. However, the machine's fickle reputation is about to change as Felder has developed a range of edgebanders, which according to the machinery manufacturer and supplier, require very little maintenance, is fast and easy to set up and produce the right results. Sounds like a lot of sales fluff? Read on you might be surprised.

The P200 and G200 edgebanders have a compact design and are ideal for low to medium production. The machines can band tape thicknesses from 0.4mm to 2mm. Two versions of edgebander are offered by the machines - the P200 is a 'Hot Air' edgebander and the G200 is the more traditional 'Glue Pot' version.

However it is the machines modern design, ease of use and the components used in their construction that makes these

machines special. Control knobs and dials are easy to access and enable adjustments to be made in one simple step. Stainless steel guillotine end-trimmers ensure a crisp clean cut at the front and back of the panel, the top and bottom trimmers have four replaceable TCT knives in a 70mm diameter moulder head and the hinge for the feeding arm is a solid cast iron construction. To make maintenance easier the complete feeder arm can be unlocked and tilted out of the way, giving complete access to the internal machine components so that dust and wood chips can be blown away.

Felder will also be introducing the P100 for tape thicknesses to 1mm and the G300 for tape thicknesses to 3mm in the near future.
